MICROCAT®-P

Phosphate Blend for Biodegradation & Bioremediation Programs

Description

MICROCAT-P is a specialty blend of phosphorus salts for use in stimulating biological activity in soils and sludges. **MICROCAT-P** provides phosphorus for bioremediation programs. It is formulated specifically for use with **MICROCAT** microbial inocula, buffering agents and surfactants to enhance the rate and consistency of biological processing of soils, sludges, and contaminated waters.

Applications

BIOREMEDIATION

Bioremediation of organic contaminants in soils and sludges is in widespread use. It provides a low-cost, easy route to the removal of fuels and other organic contaminants. Contaminated soils and sludges are usually deficient in the phosphorus content necessary to stimulate microbial activity. **MICROCAT-P** makes up the deficiency with a mixture of environmentally compatible salts.

WASTEWATER TREATMENT

As a natural source of phosphate **MICROCAT-P** is also used to redress phosphorous deficiency in wastewater treatment.

Product Characteristics

Appearance	Gray, prilled solid
Contents	Phosphorus salts (19%)
Shelf Life	Five Years
Packaging	25 Lb (11.3 Kg) plastic pails/220 Lb (100 Kg) fiber drums

Application Programs

MICROCAT-P is applied at the rate of approximately 1% to 2% by weight of the organic contaminant concentration in the soil. Your Bioscience, inc. Technical Representative will prepare a detailed, coordinated application program to fit your site remediation or wastewater treatment program.

Optimal Application Conditions

For best results, apply this product under the following conditions:

CONDITION	RANGE	OPTIMUM
pH	6 - 9	7
Temperature, ° C	10 - 40	35

If your system is operating outside these ranges, contact your Bioscience, Inc. Technical Representative for a complete system survey and recommendations.

Storage and Handling

Storage	Dry conditions. Do not moisten.
Handling	CAUTION: If accidental skin contact occurs, wash affected area with soap and warm water.
